Education

2027 (Expected)	Ph.D., Economics, University of Washington Fields: International Finance, Asset Pricing, Macro-Finance
2023	M.A., Economics, University of Washington
2020	M.S., Statistics, University of Notre Dame
2018	B.S., Mathematics, University of California - Irvine B.A., Quantitative Economics, University of California - Irvine B.S., Chemical Engineering, University of California - Irvine

Working Papers

When Yield Curves Invert Together: Currency Crash Risk (Job Market Paper)

In a portfolio of currencies, such as the carry trade, currency- specific risk might be diversified, while systematic risk is affecting every risky currency. I show that a signal constructed from clustered yield curve inversions predicts crashes in high-interest and high-beta currencies, and the carry trade. This result plays a role in giving an early warning to avoid the well-known carry trade crashes. Further conditioning on the slope shape of global yield curves refines the signal to distinguish between inversions driven by slowing growth expectations versus inflation-fighting monetary policies. The latter comes with a higher interest rates environment, which provides a higher compensation for the carry trade crash risk.

Selected Work in Progress

Cross-Asset Inversion Clocks

I study whether information signaled by yield curve inversions unfolds in a systematic sequence across financial markets and the economy. Comparing isolated inversions with cross-country clusters of inversions, I use the time since inversion to examine the order and timing of movements in equity, commodity, and credit markets, alongside changes in economic activity and inflation.

Maintaining Carry Structure in Machine Learning Carry Trade

Machine learning approaches to carry trades tend to prioritize return prediction at the expense of the strategy's defining structure: long high-interest-rate currencies and short low-interest-rate currencies. This makes it unclear whether performance gains improve the carry trade or reflect a different currency strategy. I address this issue by imposing the carry structure while using time series machine learning models to capture carry trade crashes.

Instructor of Record

School of Business, University of Washington - Bothell
Introduction to Macroeconomics
Foster School of Business, University of Washington
Introduction to Statistical Methods
Department of Economics, University of Washington
Intermediate Macroeconomics, Introduction to Microeconomics

Teaching Assistant

Foster School of Business, University of Washington
Master's Level Probability and Statistics, Introduction to Statistical Methods
Department of Statistics, University of Washington
Elements of Statistical Methods
Department of Economics, University of Washington
Introduction to Macroeconomics, Global Health Economics
ACMS Department, University of Notre Dame
Projects in Actuarial Science, Statistical Methods and Data Analysis,
Applied Mathematical Financial Economics, Applied Linear Algebra,
Introduction to Probability, Statistics for Business

Fellowships and Awards

2021 George and Pearl Corkery Scholarship
2018 Order of Merit Awards

Professional Service

2024-2026 Macroeconomics and International Trade Seminar and Brownbag Organizer
2022-2024 **President**, Graduate Student Committee, Department of Economics
2023 Graduate Student Referee for Assistant Teaching Professor Search Committee

Non-Academic Employment

2021 **Panin Asset Management**, Machine Learning Engineer - Market Forecasting
